🧑 About Me

Bioinformatician with 10+ years of experience in data analysis,data infrastructure, and reproducible research. Passionate about making data analysis transparent, reproducible, and accessible.

🤹 Hobbies

- 🌳 nature
- ⛰️ mountains
- 🥾 hiking
- 🚴 cycling
- 🐧 linux
- 🥕 farming
- 🎥 arthouse movies

🛠️ Skills

- R
- Python
- Bash scripting
- Snakemake
- Nextflow
- Git
- Markdown
- High Performance Computing (HPC)

💼 Expertise

- amplicon metagenomics
- shotgun metagenomics
- amplicon sequencing (NGS)
- taxonomic classification
- data curation & management
- pipeline development
- reproducible research

</> Pipeline updates

- a new pipeline as update to the original LSU pipeline is in development
- it uses the nextflow nf-core/ampliseq pipeline for initial sequence processing
- Tree building and phylogenetic placement are performed by epa-ng and gappa
- Original R scripts are used for clade extraction and taxonomy assignment

Source code and documentation: mdehollander/AMF-LSU-Database-and-Pipeline2 (ampliseq branch)

> ⚠ **Work in progress**
>
> This pipeline is under active development. Scripts and documentation may change as we finalize the workflow.

- Planned development: These post-ampliseq scripts are currently executed manually in sequence. A standalone Nextflow pipeline is in development that will automate these downstream scripts into a single, reproducible workflow run after ampliseq.
